PVA710 Optical Bonding System*

The PVA710 Optical Bonding System is used to dispense and assemble optical devices in atmosphere without bubbles. It is an ideal solution for use with any optically clear acrylic or silicone.

The system offers a complete process including dam and seal dispensing and curing, fill dispensing and cover placement. Sample products include touch screen to LCD, cover glass to LCD, and more.

The PVA710 employs a robust gantry system featuring precision ball screw slides driven by brushless DC servo motors. Every axis of motion features optical encoder feedback for a truly closed-loop process. The cover glass trunion provides an assembly means where the bonded surface is not contacted by the system.

The system is designed to accommodate a panel up to 17" at 16:9.

The PVA710 Optical Bonding System has many integrated features including:

- Vision correction of X, Y and skew
- Exclusive PVA Portal Programming Interface
- PVA's global service network

For more information, please contact POLY DISPENSING SYSTEMS at contact@polydispensing.com or contact your local representative.

System Specifications

Power

220 V, +/- 10%, 50-60 Hz

Air

80 psi, dry non-lubricated

Dimensions

1816mm x 1268mm x 1424mm
71.5" x 49.9" x 56.1"
